## Zipper

## Zipper

Zipper is a fastener consisting of two strips of fabric, called tapes, which are joined together by a series of interlocking teeth. The teeth are usually made of metal or plastic and are arranged in a regular pattern along the length of the tapes. The zipper pull is a small piece of material that is attached to the tapes and is used to move the teeth together and apart. Zipper is a common fastener used in a wide variety of applications, from clothing to luggage.
