
Pouch Film Laminations

Using the latest technology and production techniques, BSY's roll stock film products are second to none when it comes to quality. Roll stock packaging is very common among products that require tight sealing, lamination, lidding and flow wrapping.

Our roll stock film specifically caters to vertical form fill seal (VFFS) and horizontal form fill seal (HFFS) applications. Unique features can be added on, including Inno-Lok® and Pour & Lok® resealable options. Laser scoring technology can also be applied to your finished product upon request.

We can print up to 10 different colors and the film can be configured for a variety of structures. Our team has years of technical experience working with form fill seal machines and we understand how important it is to apply the proper specifications before production. Whether it's improving productivity or extending shelf life, Eagle's roll stock film is designed to adhere to your specific products and goals.

CHB (Clear High Barrier) Flexible

Packaging Films

Our CHB flexible packaging films provide a cost-effective alternative to foil packaging film laminations. Features include:

- Outstanding oxygen & moisture barrier properties
- Transparent - providing optimum product visibility
- Excellent sealing characteristics
- Available with customized sealant layers for peelables, frangibles, or hermetic sealability
